Ultrasound-Guided Regional Anesthesia - A Practical Approach to Peripheral Nerve Blocks and Perineural Catheters

ril. 9780521515788 Lst 65 pagg. 256;

Cambridge U.P. (01/06/2010)

Anestesia / Anesthesiology

Regional anesthesia is a fast-growing field, fuelled by the application of ultrasound technology over the last decade. This book is a technique-oriented guide, which introduces the use of ultrasound technology with practical instruction in the placement of peripheral nerve blocks and continuous perineural catheters. Each procedure is summarized for quick, easy reference, and supplemented by ultrasound images, color photos, and detailed illustrations. Helpful hints and instructions are provided to further optimize block success

br. 9780199587353 Lst 39,95 pagg. 264;

Oxford U.P. (01/08/2010)

Anestesia / Anesthesiology

Ultrasonographic guidance for regional anaesthetic blocks is an innovative technique that allows for the direct visualization of nerves, adjacent structures and the position of the needle, as well as for the precise observation of the spread of local anaesthetic. The advantages of the technique allow for the exact administration of moderate volumes of local anaesthetic, reducing the risk of complications

Clinical Ambulatory Anesthesia

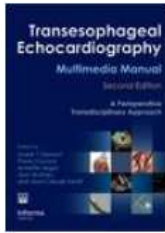

br. 9780521737814 Lst 32,50 pagg. 194;

Cambridge U.P. (01/06/2010)

Anestesia / Anesthesiology

Ambulatory care can be a challenging setting in which to provide anesthesia – not all patients are suitable for rapid discharge post-operatively and opinions differ as to which types of surgery should be performed as day cases. This comprehensive guide delivers up-to-date, evidence-based advice on how to provide optimal anesthesia care for ambulatory surgery. Written by a leading clinical anesthesiologist, it provides clear guidance about how to handle particular patients in particular situations.

Chirurgia / Surgery

Provides a comprehensive, evidence based review of the anatomy, assessment and management of colorectal conditions in a practical and easy to access format. Contains over 200 figures to illustrate the procedures and anatomy described. Closely mapped to the curriculum of the ISCP, ACPGBI and American Board of Colon and Rectal Surgeons. Essential revision tool for those preparing for the FRCS exam. Colorectal Surgery is an essential revision tool for general surgical trainees preparing for the FRCS examination, and in particular those declaring colorectal surgery as an area of special interest. It provides easy access to relevant, up-to-date information in a portable format which can be used at work or for study. All topics are covered in depth with reference given to important papers, guidelines and meta-analyses. There are sections on related specialties and basic applied anatomy, while further chapters address the presentation of colorectal disease in the outpatient clinic, a review of colorectal assessment tools, and detailed, practical information regarding the management of benign and malignant colonic and anorectal conditions

Pancreas transplantation has rapidly moved from an experimental procedure associated with high rates of morbidity and mortality to a mainstream technique with excellent patient and graft survival. Over 30,000 pancreas transplants have already been performed. The value of pancreas transplantation however must be balanced against the risk of the operative procedure and the innovative long-term immunosuppressive therapy. The indications for this procedure and the selection of the patients are critical to ensure low mortality and any improvements in quality of life

Neurologia / Neurology -ONCOLOGIA / ONCOLOGY

This is the first book on this subject in ten years. There is no recent competition. Most neuro-oncology texts focus on primary tumors and not the concomitant complications and how to treat them. It book provides an in-depth review of the neurological complications of systemic cancer, including common problems like brain metastases, spinal cord compression, cerebrovascular events, and leptomeningeal disease, as well as less common complications such as paraneoplastic disorders and neoplastic plexopathy. In addition to chapters covering the major complications, other chapters review problems related to each specific tumor type (e.g., breast, lung, colorectal), and neurological complications related to the treatment of cancer, including irradiation and chemotherapy.
