Mayo Clinic Atlas of Regional Anesthesia and Ultrasound-Guided Nerve Blockade

ril. 9780199743032 Lst 79,99 pagg. 496;

Oxford U.P. (01/04/2010)

Anestesia / Anesthesiology

The Mayo Clinic Atlas of Regional Anesthesia and Ultrasound-Guided Nerve Blockade is a practical guide that provides a detailed and systematic approach to regional anesthesia of the upper and lower extremity, including ultrasound-guided regional techniques. The book provides a comprehensive overview of both traditional and ultrasound-guided techniques of brachial plexus, lumbar plexus, and lumbosacral plexus blockade. Each regional technique is clearly described and illustrated with ultrasound images accompanied by corresponding color anatomic illustrations. Specific information provided within each chapter includes clinical applications, relevant anatomy, surface anatomy, proceduralist and patient positioning, traditional and alternative approaches to the technique itself, needle insertion site, needle redirection cues, ultrasound Sonoanatomy, ultrasound-guided techniques, side effects and complications, and suggested reading. Special emphasis is given and abundantly illustrated on hand position and how to precisely grasp and manipulate the ultrasound probe and needle for each block technique

Anaesthesia for Oral and Maxillofacial Surgery

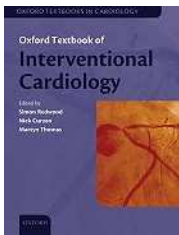

ril. 9780199564217 Lst 95 pagg. 360;

Oxford U.P. (01/05/2010)

Anestesia / Anesthesiology

Part of the Oxford Textbooks in Anaesthesia series, Anaesthesia for Oral and Maxillofacial Surgery is an authoritative, evidence based textbook on oral, dental, and maxillofacial surgery. Oral, dental, and maxillofacial surgery represents one of the most common indications for anaesthesia worldwide. The anaesthetist can be called upon to provide anaesthesia for patients presenting with impacted or carious teeth, infections of the mucosa and adjacent structures, facial injuries, head and neck cancers, salivary gland disease, facial disproportion, temporomandibular joint disorders, cysts, and tumours of the jaws. Anaesthetists may also be involved in managing patients experiencing chronic and intractable facial pain. An understanding of this subject matter is fundamental to the safe practice of anaesthesia

Microbiologia / Microbiology

Helicobacter pylori is a globally significant pathogen that infects half of the population of the world. Its recognition enabled the development of new therapeutic and preventative strategies for serious health conditions such as gastric cancer, of which it is the major causative agent. Providing a broad overview of the current understanding of this pathogen and emphasising its world health impacts, this book explores a range of topics including virulence factors, vaccine development and obstacles, epidemiology, antibiotic resistance and the role of Nod receptors, with a foreword by Barry Marshall, the Nobel Laureate and co-discoverer of *H. pylori*. It is an essential resource for researchers, students and nmedics in infectious and *Helicobacter*-associated diseases.

Neurochirurgia / Neurosurgery

Being a very mobile region of the body that encloses vital structures, the considerable risk involved with surgery in the area of the craniovertebral junction makes it a field of continuous research. Especially as regards refinement and improvement of surgical approaches that ideally should combine the highest degree of efficiency with the highest margin of safety, the development of such techniques has always been an exquisite challenge which continues to evolve. Over the last decade quite a number of new insights in biomechanics as well as new surgical techniques have been developed, dynamically changing the face of treatment of craniovertebral junction pathology
