COMPREHENSIVE HANDBOOK OF IODINE

ril. 9780123741356 Lst 130 pagg. 1334;

Academic Press (01/02/2009)

Alimentazione / Nutrition

Over two billion people worldwide are at risk for the spectrum of disorders known as "The Iodine Deficiency Disorders." 1-10% will suffer cretinism; 5-30% will have some sort of brain damage or neurological impairment and 30-70% will be hypothyroid. The causes of iodine deficiencies can be considered from both simplistic and more complex perspectives: From the leaching of iodine from soil resulting in crops with low iodine content to malnutrition resulting in impaired iodine absorption. Poor dietary diversification and impoverished socio-economic development can also lead to iodine deficiencies

Molecular Pathology - The Molecular Basis of Human Disease

ril. 9780123744197 Eur 73,95 pagg. 665;
Academic Press (01/02/2009)
Genetica / Genetics

Most "pathology" textbooks cover diseases and disease processes from the perspective of description (what does it look like and what are its characteristics), risk factors, disease-causing agents, and to some extent, cellular mechanisms. However, these books typically contain very sparse coverage (if any at all) of molecular mechanisms of disease. As the molecular basis of human disease becomes better characterized, and the implications for understanding the molecular basis of disease becomes realized through improved diagnostics and treatment, there is a need for a new textbook where molecular mechanisms represent the focus. Molecular Pathology focuses on the molecular basis of major human diseases and disease processes, presented in the context of traditional pathology, with implications for translational molecular medicine.

Neural Signaling: Opportunities for Novel Diagnostic Approaches and Therapies

br. 9781573317047 Lst 70 pagg. 360;

Wiley-Blackwell (01/01/2009)

Neurologia / Neurology

Low-molecular-weight chemicals, which are produced and secreted by neurons and a limited range of non-neural cells, are the major vehicles for communication of nerve cells with each other and with neurally controlled non-neural cells. Research over the past several decades has identified a wide spectrum of such neuromediators, delineated their structures, elucidated pathways of biosynthesis and biodegradation, and determined the processes of development and function that they influence physiologically
